

## AD Triage

# A portable solution for forensic collections in the field or on site—Acquire from live or turned off computers

Fast identification and analysis of digital evidence is crucial for time-sensitive investigations. Whether you are law enforcement dealing with the growing backlog of devices waiting to be processed or a company managing the rising costs of e-discovery, AD Triage allows users to collect data from computers, whether they are turned on or turned off.

### What is AD Triage?

Built on FTK® technology, AD Triage is an easy-to-use, forensically sound, stand-alone triage tool for the on-scene preview and acquisition of computers that are live or have been shut down. The entire hard drive can be saved to a USB device, external hard drive, or exported to a designated location on a network. Ideal for users who are inexperienced with computer forensics software, AD Triage is built for first responders or non-technical users who need to preserve evidence in the field.

### Unlike other products on the market, AD Triage is: Customizable

Experienced, tech-savvy data forensic investigators can use AD Triage to preview and search data prior to collection or preconfigure triage devices to allow inexperienced personnel to securely preserve digital evidence on scene.

### Portable and Fast

AD Triage acquires volatile (data available only when the power is on) and all hard drive data. There's no need to carry a laptop or write blocker.

### On-site data forensic investigation software—Designed for the non-technical user

When your teams need a solution to collect data on site and rely on first responders, IT, or even paralegals who are technologically savvy but not experienced data forensic

investigators, you can rely on AccessData. Use AD Triage to forensically collect computers that are live or have been shut down, or nFIELD™ to forensically collect mobile devices. Both of these solutions are designed for the non-technical user and require little to no training.

### Support & Training

Our goal is to provide superior technical support, product training and development to ensure users achieve the most value from their technology investment.

**Support options** can be found at <http://marketing.accessdata.com/Support> and include:

- Telephone technical support
- A knowledge base portal containing solutions to common questions
- A discussion forum where users can post questions and find answers
- User guides, quick-reference guides and more!

**Training options** can be found at <http://marketing.accessdata.com/ADTraining> and combine a unique teaching methodology with state-of-the-art technology. Options include in-person classroom, live online, or via our Learning Management System (LMS). For access to LMS visit <http://marketing.accessdata.com/LMStraining>
